

GlosCAN's Aims

1. To promote constructive debate and initiate events and actions with the intention of bringing about the major changes required in Gloucestershire and beyond to reduce human-induced climate change.
2. To raise awareness amongst individuals, organisations, businesses and public figures in Gloucestershire of the inadequacies of the current global and national commitments on climate change.
3. To encourage individuals to become supporters of GlosCAN.
4. To base our actions and activities on appropriate scientific evidence.
5. To collaborate with other organisations with similar aims and values whether within Gloucestershire, surrounding areas or beyond.
6. To conduct our activities in truthful, respectful and non-party-political ways and to demonstrate accountability to our Supporters.

If you agree with our Starting Points and Aims

Please sign up as a supporter at

GlosCAN.org/sign-up/

Gloucestershire Climate Action Network

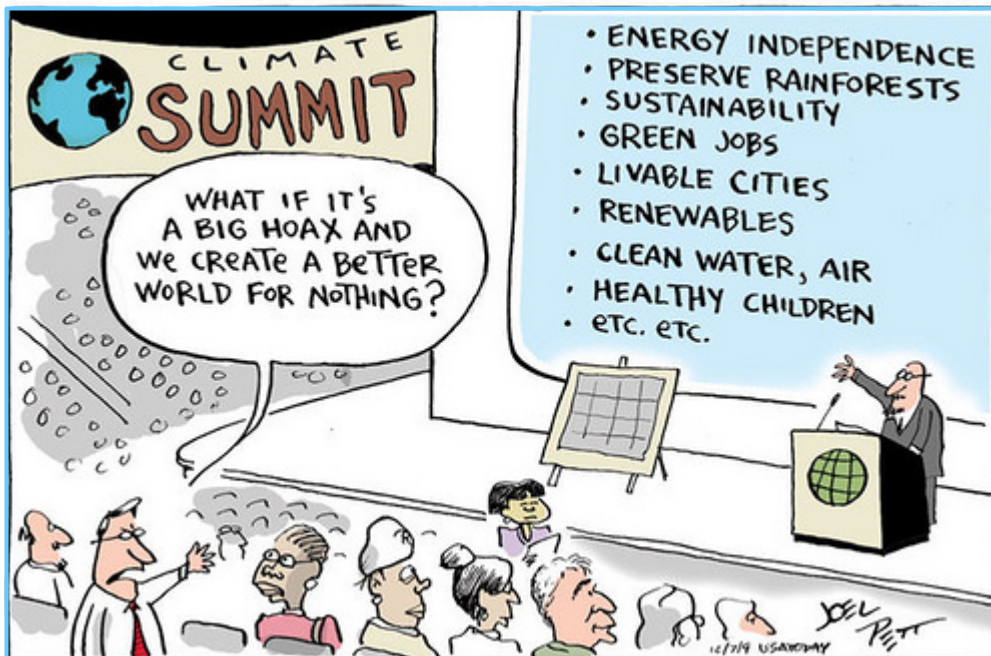

GlosCAN is campaigning for action to bring about the changes needed to avert dangerous global warming.....

Thinking globally.... but acting locally,
here, in Gloucestershire.

For further details, and how you can help:

...see
over page

GlosCAN aims to become a voice with the weight of supporters behind it, pushing for regional and national zero-carbon policies.

If you agree with these starting points and the aims of GlosCAN (see 'aims' over-page) ...then please take the step of becoming a supporter of GlosCAN:...just go to the web site to see how.

Don't worry, there is no sign up fee ! (although any donations are very welcome of course !)

GlosCAN's Starting Points

We acknowledge the following:

- The scientific evidence for climate change resulting from human activities is beyond reasonable doubt.
- Already, severe effects of climate change are being felt, in ways that vary greatly around the world.
- Climate change poses risks to global food production, collective security, viability of many coastal/port cities (including Gloucester), and ultimately the functioning of major ecosystems and of human civilisation.
- These risks will become increasingly serious in the absence of rapid and effective action to reduce greenhouse gas emissions to net zero.
- Existing commitments by governments (including the 2015 Paris Agreement) recognise the scale of the challenge but do not create a robust mechanism to ensure that the required rapid and effective actions will be implemented.

Gloucestershire Climate Action Network (GlosCAN) is an entirely volunteer-run, self-funded, non-party-political campaigning group, with a network of registered Supporters who agree with our 'Starting Points' and 'Aims'.

The activities of GlosCAN are agreed by the Steering Group, in accordance with the Constitution of GlosCAN.

GlosCAN supporters on the roof of Gloucester cathedral, to celebrate the solar panels installed there in 2016.
